KÖMMERLING®

Beautiful new *window world*

Windows and doors are a part of your living space and your totally individual living design. The decision about the right window system should therefore be given your careful attention.

Windows emphasise the character of your house - from the inside and outside

Windows are amongst the most demanding construction elements of a house. Windows are more than just a means to a purpose. They give life to a facade and increase the material value of a house. Windows are construction elements with the most design variety. We provide you with everything you need for your unmistakably individual windows: Any possible window form and layout. Wide colour range. Bars - applied or internal between the insulating glazing. Elegant handles. From standard glazing to special glass to highly profiled glass, for example for your bathroom or front door to keep out unwanted eyes.

Our PVC profiles are stabilised with environmentally-friendly calcium/zinc instead of lead. This not only improves environmental protection, it also improves quality through every life phase of the window - more resistant against weather, more durable gloss finish, more purity during recycling. Environmental protection that pays off.

A plus in thermal insulation, noise protection and safety

Even our standard design window systems have excellent insulation and sound protection properties. These values can be improved even more with special thermal or noise protection glazing. In addition to the basis safety features of this window system, a top level of security can be achieved with regards to break-in prevention with security hardware, reinforced glass and locking handles.

- ▶ Elegant window design of curved lines with slender profile faces
- ▶ Stable profile cross-section with excellent statics for long window durability
- ▶ Integrating innovative design-protected steel reinforcement expands the system into a six-chamber design with superior thermal insulation properties, U_f value = 1.3 W/(m²K).
- ▶ Easy care and never needs painting
- ▶ Our PVC profiles are stabilised with environmentally-friendly "greenline" calcium/zinc instead of lead.

EuroFutur Elegance

Window system with 70 mm installation depth, offset design with grey seals.
